2011–2012 NBA SCHEDULE OVERVIEW

The 2011-12 NBA season will be a very interesting one. The league compressed 66 games into 124 days meaning that each team will play an average of more than one game every two days during the regular season. For the first time since the 1998-99 strike season there are times when a team plays for three straight days. In fact, there are 42 such occurrences and a complete listing of them is given in this publication. To really understand the difference between this season and a typical NBA regular season, consider the following table, which gives the total number of regular season occurrences of the four-games-in-five days, 5-in-6 and the 5-in-7 and 6-in-8 scheduling situations over the past seventeen NBA seasons.

2011-12 Scheduling Situations

SEASON	4-in-5	5-in-6	5-in-7	6-in-8
1995	90	0	2	0
1996	91	0	4	0
1997	75	0	3	0
1998	218	28	105	14
1999	101	0	5	0
2000	101	0	0	0
2001	106	0	11	0
2002	102	0	3	0
2003	88	0	5	0
2004	90	0	5	0
2005	81	0	0	0
2006	90	0	0	0
2007	78	0	0	0
2008	72	0	0	0
2009	80	1	1	0
2010	68	0	0	0
2011	218	29	98	17

There will be more than three times as many occurrences of a team playing their fourth game in five days this season than there was last season – despite the fact that there will be 240 fewer games played this season than last season. Even more compelling is that fact that there has been a total of only ONE occurrence of the five-games-in-seven days over the past six seasons. This season we get 98 occurrences of this rare scheduling situation. In addition, there will be 29 games this season in which a team will be playing their

fifth game in six days. Finally, there will be 17 occurrences of the grueling six-games-in-eight days this season.

Handicappers that are able to understand the ramifications of this should find the pickings very easy this season.

In addition, there are twenty occurrences of a brutal five-games in six days stretch this season. This scheduling situation does not normally occur. The first of these twenty stretches begins on Dec 28th when the Nuggets play in Utah, They then travel to Portland for a game on the 29th. They have the 30th off before playing the Lakers in LA on the 31st, the Lakers at home on the 1st before hosting the Bucks on the 2nd. Milwaukee plus the points should be a possibility.

Another interesting feature of this year's NBA schedule is that the team have been partially "seeded." In a normal regular season, each team in the Eastern Conference plays every team in the Western Conference twice – once at home and once on the road. This season, however, each team in the Eastern Conference plays only THREE teams in the Western Conference twice, while playing every other team in the West only once. So, now the schedule-maker has a strong influence on the level of difficulty of a team's schedule. If you are a team from the Eastern Conference, you would much rather have two games with the Kings, Timberwolves and Warriors while playing teams like the Mavs, Lakers and Thunder only once. Similarly, every Eastern Conference opponent usually plays every other Eastern Conference team four times during the regular season. This year, however, there will only be six four-game series. If you are an Eastern Conference team, you would like the Cavs, Wizards, Raptors, Pistons, Sixers and Pacers to be the set of teams you have to play four times.

Clearly, the schedule-makers have much more influence over the level of difficulty of a team's schedule this season, than in any non-strike season.

Astute handicappers will pay attention to these match-ups. For example, the only three Western Conference teams that the Celtics will play twice this season are the Lakers, Mavs and Thunder. Ouch. Similarly, the three Eastern Conference teams that the Thunder were assigned are the Celtics, Heat and Magic. On the other hand, the three Eastern Conference team that the Rockets have to play twice are the Bobcats, Raptors and Wizards. In the same vein, the three Western Conference teams that the Pacers get twice are the Warriors, Hornets and Timberwolves. A complete breakdown of these match-ups is presented in this publication.

Indeed, the NBA should offer a number of terrific investment opportunities this season for those that are well prepared. NBA Futures seem vulnerable to anyone that has done their homework. Besides the level of difficulty of each team's schedule, a key question is how are the more "mature" teams like Boston and San Antonio going to handle the compressed season? Will they put forth a muted effort during the regular season and save themselves for the playoffs?

This publication will provide an analysis of each team's 2011-12 NBA Schedule to help NBA Handicappers start the season well armed with the information they need to win. This type of analysis is especially helpful when trying to forecast the total number of wins a team might achieve over the regular season, as NBA Futures Players do.

SDQL Hint

To see all the five-games-in-six-days this season, use the SDQL text:

(rest + p:rest + pp:rest + ppp:rest) = 1

To perform this query yourself, visit the NBA Query page at www.killersports.com/nba.py/query.

2011–2012 NBA OPPONENT BREAKDOWN

This season, there will be an unusual distribution of opponents because of the shortened season. Normally, each team in the league has a home-and-home series with every team in the other conference. That is, the Hawks, who are in the Eastern Conference, will host every Western Conference team once and they will visit every Western conference team once.

This season, however, each team will only play 18 inter-conference games instead of 30. These eighteen games will consist of three of the normal home and home series, six single home games and six single road games. A complete listing of these match-ups are given on the facing page. For example, we can see that the Hawks play a home-and-home series with the Trailblazers, Suns and Clippers this season. That is, the Hawks play once at home and once on the road vs the Trailblazers, Suns and Clippers this season. Also, in the center column we see that the Hawks have home games vs the Timberwolves, Grizzlies, Warriors, Thunder, Jazz and Mavericks. Atlanta does not play these six teams on the road this season. In the final column, we see that the Hawks have to visit the Rockets, Spurs Hornets, Lakers, Kings and Nuggets. Atlanta will not host these six teams this season.

Of course, Eastern Conference teams would prefer that their three home-and-home series vs the Western Conference teams be against teams like; Minnesota, Sacramento and perhaps the LA Clippers rather than teams like the Lakers, Mavericks and Thunder.

In a normal season, each team would play 52 games with teams in their own conference. This season, however, each team only will play 48 intraconference games. So, most of the missing games this season are interconference (East vs West) games.

The intraconference games are divided into three groups. Each team will face six opponents that they will play four times – two at each site. There will be four interconference opponents that each team will play three times – two at home and one on the road. Finally, there will be four interconference opponents that each team will play three times – one at home and two on the road. For example, we see that the Hawks play a full four-game season series vs the; Nets, Heat, Bulls, Bobcats, Raptors and Pistons. In the center column, we see that the Hawks get two home games and one road game against the; Wizards, Cavs, Knicks and Celtics. Finally, the Hawks get one home and two road games vs the Pacers, 76ers, Bucks and Magic.

In a similar fashion, an Eastern Conference team would prefer that the six other Eastern Conference teams they have to play four times are relatively weak opponents. It appears that the Nets have a favorable schedule in this aspect, as their four-games series this season are against the; Hawks, Bobcats, Cavs, Pacers, Raptors and Sixers. Nice.

In the Western Conference, we see that the Utah Jazz are the only team in the league that has four games with the Lakers, Mavericks and Spurs this season. Tough.

Let's take a closer look at the bottom table to see which teams got tough and which teams were assigned easy non-conference opponents for their three home-and-home series.

The interesting, but understandable, scheduling feature here is that both the Heat and the Celtics have to play the Lakers, Thunder and Mavericks twice each this season. The NBA schedule-makers are no dummies. They know which games will draw an audience. The Bulls, for some reason, got off relatively easy here, as their three Western Conference home-and-home series this season are against the Grizzlies, Hornets and Kings.

Other Eastern Conference opponents with favorable Western Conference opponents are the Pacers and the Pistons. Indiana gets the Warriors, Hornets and Timberwolves twice each and the Pistons, get the Grizzlies, Kings and Timberwolves twice each.

Turning our attention to the Western Conference, we see that the toughest trio of Eastern Conference opponents might be the Heat, the Celtics and the Knicks and both the Mavs and Lakers are dealt this hand. The Thunder get the Heat, Celtics and Magic, which is also no picnic.

Western Conference teams with easy Eastern Conference opponents include the Rockets, who get the Wizards, Bobcats and Raptors and the Timberwolves, who get the Pacers, Pistons and Bobcats.

Clearly, a thorough analysis of each team's 2011-12 opponents will result in a knowledge of how many regular season wins a team might be expected to achieve this season. It is clear that the schedule makers – much more than in a normal regular season – have a strong influence on the difficulty of a team's schedule. Get in front of the pack and ahead of the linesmakers by poring over the facing page to get a solid picture of what each team's expectations might be this season. Then consider backing up your opinion with an investment.

NBA System

NBA teams are 0-21 ATS (-10.1 ppg) since 2005 during the regular season at home with less than two days rest when they are off a loss by more than ten points in which they shot less than 40% from the field and less than 60% from the free throw line, as long as they were not a double-digit dog in that loss.

2011-2012 BACK-TO-BACK ROAD GAMES

In all the professional sports, the back-to-back road games in the NBA might be the most physically grueling. In the NFL, there are different players for offense and defense and the NFL plays sixteen regular season games a year. In the NBA, there are usually 82 regular season games and the players must play both defense and offense. Unlike other sports, the line for the side on the game is adjusted when one team is unrested and the other is not. That is, the NBA is the only major sport that adjusts the lines for a fatigue factor. Let's investigate this further

To start, we present the following four query results with their associated Sports Data Query Language (SDQL) text:

SDQL: A

SU: 7745-11852 (-3.3) (39.5%)
ATS: 9707-9512-378 (0.1) avg line: +3.4

SDQL: rest>0 and A

SU: 5375-7861 (-2.8) (40.6%)
ATS: 6627-6355-254 (+0.3) avg line: +3.1

SDQL: rest=0 and A

SU: 2365-3982 (-4.2) (37.3%)
ATS: 3073-3150-124 (-0.3) avg line: +3.9

SDQL: A and p:A and rest=0

SU: 1292-2110 (-3.9) (38.0%)
ATS: 1678-1655-69 (-0.0) avg line: +3.9

The first query, **A**, (A means the away team) gives the results of all road games since 1995-96. Here we see that the road team has a record of 7745-11,852, which is 39.5% winners. We also see that they have been a 3.4 point underdog on the average and we see that they have lost by an average of 3.3 ppg.

The second query, **A and rest>0**, gives the results of all road games since 1995-96 in which the road team did not play the day before. Here we see that the rested road team is 5375-7861 straight up, which is 40.6% winners. We also see that they have been a 3.1 point underdog on the average and we see that they have lost by an average of only 2.8 ppg.

The third query, **A and rest=0**, gives the results of all road games since 1995-96 in which the road team played the day before. Here we see that the unrested road team is 2365-3982, which is 37.3% winners. Also, we see that they have been a 3.9 point underdog on the average and we see that they have lost by an average of 4.2 ppg.

Finally, the fourth query, **A and rest=0 and p:A**, gives the results of all road games since 1995-96 in which the road team played on the road the day before. Here we see that the unrested road team is 1292-2110, which is 38.0% winners. Also, we see that they have been a 3.9 point underdog on the average and we see that they have lost by an average of 3.9 ppg.

So, unless the schedule-makers assign more back-to-back games to teams that are expected to be poor, the results indicate that NBA teams are negatively affected when playing on the with no rest. Specifically, since the start of the 1995-96 NBA season, road teams with rest have lost by an average of 2.8 ppg and road teams without rest have lost by an average of 4.2 ppg. Further, the linesmakers have attempted to correct for this, as road teams without rest have been getting an average of 3.9 points whereas rested road teams have only been given an average of 3.1 points.

This season there are 188 back-to-back road games which are distributed among the 30 NBA teams. Some teams have been saddled with a large number of back-to-back road games and others have only a few. We can also look at the number of times a team is hosting an opponent that is playing in the second of B2B road games. Clearly, if a particular team hosts a large number of opponents coming in off another road game the previous night that team has an advantage. The number of times a team plays and hosts the second of back-to-back road games are important factors in determining the difficulty of a team's schedule and thus an important factor in estimating the number of wins they will have over the season.

To aid in this investigation, we present a table on the facing page that gives the number of B2B occurrences for each team for the upcoming 2011-12 season for two situations; one is when the team is playing its second road game in two days and the other is when the team is hosting an opponent that is playing its second road game in two days.

Road Warriors

The Chicago Bulls are 16-0 ATS (+7.8 ppg) since November 30, 2009 as a dog when they are playing in at least their third straight road game. The SDQL text is:

team=Bulls and AD and p:A and pp:A and 20091130<=date

Check out the complete game listing for this trend by running this query at <http://killersports.com/nba.py/query>

2011–2012 BACK-TO-BACK ROAD GAMES (CONTINUED)

of Back-to-Back Road Games 2011-12

Team	Playing	Hosting	Differential
ATL	4	7	+3
BOS	7	2	-5
CBC	5	7	+2
CHI	6	4	-2
CLE	3	3	0
DAL	8	7	-1
DEN	5	7	+2
DET	6	4	-2
GSW	9	7	-2
HOU	8	7	-1
IND	2	7	+5
LAC	8	6	-2
LAL	8	6	-2
MEM	5	5	0
MIA	7	2	-5
MIL	5	7	+2
MIN	9	9	0
NJN	4	9	+5
NOR	6	8	+2
NYK	6	10	+4
OKC	4	5	+1
ORL	6	8	+2
PHI	4	2	-2
PHO	7	9	+2
POR	7	7	0
SAC	9	5	-4
SAN	10	4	-6
TOR	8	6	-2
UTH	7	11	+4
WAS	5	7	+2

Looking down the first column we see that the Spurs are the only team this season to play double-digit back-to-back road games. It is relevant to note that are one of the teams that is likely to be adversely affected by playing two road games in two days. The Kings, Timberwolves and Warriors each have nine with the Raptors, Clippers, Rockets and Mavericks with eight each. On the other end of the list, we find that the Indiana Pacers only play TWO back-to-back road games this season. The Cavaliers are right behind with three

and they are followed by the Hawks, Nets, Thunder and 76ers, who each have four back-to-back road games this season.

The o:B2B column gives the number of times a team is scheduled to host an opponent that is playing the second of back-to-back road games in 2011-12. Obviously, the higher the number in this column, the more favorable a team's schedule. Here we see that Utah Jazz host eleven teams this season that played on the road the previous day. This is tops in the league. They are followed by the NY Knicks, who get ten opponents that are playing their second road game in as many days. Teams with eight scheduled opponents who are playing the second of back-to-back road games include the Nets, Suns and Timberwolves. So, not only do the Timberwolves host a lot of back-to-back road games, they will play a lot of back-to-back road games this season.

The unlucky teams are those that host a relatively small number of teams playing their second road game in as many days. The 76ers, Celtics and Heat only get two teams all season that played on the road the previous day. Next we have the Cavs with three and they are followed by the Bulls, Pistons and Spurs, each with only four.

The final, right-most column in the table is the difference between the number of times a team hosts the second of B2B road games and the number of times a team plays B2B road games. Clearly, a team with a high positive number has a scheduling advantage and a team with a large negative number has a scheduling disadvantage.

The two teams with the highest differential are the Pacers and Nets, each with a differential of plus-five. The Pacers host seven B2B road games but pay only two and the Nets host nine B2B road games, but play only four. The Knicks and the Jazz are close behind with a differential of plus-four.

The team with the worst B2B differential this season is the Spurs at minus-six. They play ten back-to-back road games, but host only four. They are following by the Heat and Celtics, both of whom only get two opponents playing a B2B road games while playing seven B2B'ers themselves.

These numbers only tell part of the story. Another factor to consider is the level of the opponent a team gets in the second of back-to-back road games. When good teams host poor teams playing the second of back-to-back road games the straight up result of the game is unlikely to be different—the good team was going to win the game anyway. The most effective positive B2B differential includes many games where the fact that the team is hosting the second of back-to-back road games is likely to turn a loss into a win. For example, on 1/24 the Pacers host the Magic. Indiana has a days rest and the Magic played in Boston the previous night. The fact that Orlando is playing the second of back-to-back road games may give the Pacers the edge they need to score a straight up victory.

See the article on the next two pages for a complete listing of all back-to-back road games this season.

Play Smart. Play Informed. Investigate Back-to-Back road games at KillerSports.com.

BACK-TO-BACK ROAD GAMES – PLAYING

The table below gives a complete listing of all the dates when a team is playing the second of Back-to-Back road games over the entire 2011-12 NBA season. The team in the left-most column is the team playing the Back-to-Back road game. The entries in the table give the date and opponent. For example, on 1/3 the Hawks face the Bulls in Chicago having played on the road the previous night.

The level of opponent is important when determining the advantage of hosting a Back-to-Back road game. For example, on 1/13 the Cavs play at the Lakers when they played on the road

the previous night. The fact that Cleveland is playing the second of back-to-back road games is not likely to change the straight up outcome of the game because the Lakers were likely to win anyway. The situations where hosting a Back-to-Back road game is helpful is when the scheduling advantage is likely to be enough to turn a loss into a win. For example, on 12/28 the Celtics play in New Orleans in the second of Back-to-Back road games. The fact that Boston played on the road the day before may be enough to get the rested Hornets the straight up win.

Team	1	2	3	4	5	6	7	8	9	10	11	12
ATL	1/3 CHI	2/15 PHO	3/7 MIA	3/14 LAC	–	–	–	–	–	–	–	–

By scanning each team's back-to-back road games this season – both quantity and opponent – the astute handicapper can estimate the deleterious effect the back-to-back road games might have on their win-loss record for the season. Another factor to consider is the number of times the host of a back-to-back game has the rest advantage. For, example, Every time the Timberwolves play the

second of back-to-back road games this season, their opponent is rested. On the other hand, the Clippers' opponent also have no rest in six of their eight back-to-back road games.

The table on the next page gives the games in which each team is hosting an opponent that is playing the second of Back-to-Back road games.

BACK-TO-BACK ROAD GAMES – HOSTING

The table below gives a complete listing of all the dates when a team is hosting the second of Back-to-Back road games over the entire 2011-12 NBA season. This information is exactly the same that is in the previous table but it is organized differently. Here it is advantageous to have a large number of games. The team in the left-most column is the team hosting the Back-to-Back road game. The entries in the table give

the date and opponent. For example, on 12/30 the Hawks host the Nets and the Nets played on the road the previous day.

Note that the Jazz host eleven back-to-back road games this season; tops in the league. What is not shown here is that in ten of the eleven, the Jazz have rest, which makes their scheduling advantage even stronger.

Again, by scanning each team's games when they are hosting an opponent that is playing the second of back-to-back road games this season – both quantity and opponent – the astute handicapper can estimate the effect the games might have on their win-loss record for the season. The rest combination should also be considered here. For example, the Pacers have at least a days rest every time they host a team playing the second of back-to-back road games this season.

On the other hand the Miami Heat, which only host two back-

to-back road games all season, are unrested themselves in both of their games!

Note: To query the situation where a team is hosting a second of back-to-back road games, and see past results in this situation, use the following SDQL text:

H and op:A and o:rest=0

Happy hunting!

“REST VS NO REST” AND “NO REST VS REST”

Of the 990 NBA games this season, 371 feature a rested team vs an unrested team. This number is actually higher than last season even though there are 240 fewer games this season. This makes the rest combination an important factor when handicapping NBA basketball. A team with at least one days rest has a definite advantage over a team that played the previous night. Young, well-disciplined teams often can perform well even though they played the previous night whereas older teams tend to struggle when playing their second game in two days—especially if a long trip is involved.

Of course, the number of these “no rest vs rest” games is determined when the schedule is finalized. The table to the right gives the number of occurrences of the rest vs no rest (R v NR) and no rest vs rest (NR v R) for each of the 30 NBA teams over the 2011-12 NBA regular season. The “+/- R vs NR” column on the far right gives the difference between the “R v NR” and “NR v R” columns. A high positive number indicates a favorable schedule and a high negative number indicates an unfavorable schedule.

First, let’s look at the “Rest vs No Rest” numbers. The Wizards have the greatest number of rest vs no rest games in 2011-12 at 17. Next we have the Jazz, Warriors and Hawks, each with 16 games in which they are rest and their opponent played the previous day. On the unfortunate end of the spectrum we find the Cleveland Cavaliers, who only get THREE games all season in which they are rested vs an unrested opponent. Also getting the short end of the stick is the Miami Heat, who only get five “R vs NR” games this season.

In the “No Rest vs Rest” column we see that the schedule-makers were much more balanced. The Suns have the most games in which their opponent is rested and they have no rest this season, with sixteen. The Knicks and the Clippers have the fewest with only nine.

Now let’s check out the difference column. Here the number of times a team is playing a no rest vs rest game is subtracted from the number of times a team is playing a rest vs no rest game. The higher the number, the more favorable the schedule.

The Atlanta Hawks have the highest positive differential at plus six. This is followed by the followed by the Bulls and Bobcats, each with plus-five.

The Cavaliers got the unluckiest schedule with regard to rest-vs-no-rest games, as they have a differential of minus-ten. The Heat, at minus nine, also has a very unfortunate schedule. These numbers are useful when playing NBA futures, but of course, other factors such as personnel changes can be more important than scheduling. Also, some teams can handle the no rest vs rest combination whereas other struggle. To investigate past records in rest-vs-no-rest

games, use the NBA query page at KillerSports.com. Play Smart. Play Informed. Watch the rest combinations.

2011–2012 DAYS REST DISTRIBUTION

A typical NBA regular season lasts about 170 days and contains 82 games. This season, however, the regular season will last only 124 days and contain 66 games. The average days rest for a team in a normal season is about 1.07. This season, it is 0.89, which is a significant difference. This NBA season, a team will have only about 57 days off. The manner in which a team's days off are dispersed among the game days is an important factor in determining the difficulty of a team's schedule. For example, it is a distinct disadvantage if a team has a large number of games in which they play with no rest. The table below gives the days rest distribution of each of the 30 NBA teams for the 2011-12 NBA regular season. The days rest are grouped into three categories; 0, 1, 2, and 3+ days rest.

Occur of Days Rest 2011-12

TEAM	0	1	2	3+
ATL	19	41	2	4
BOS	21	36	5	4
CBC	23	33	6	4
CHI	19	38	6	3
CLE	22	34	6	4
DAL	22	34	6	4
DEN	18	41	4	3
DET	22	33	8	3
GSW	19	38	6	3
HOU	23	32	7	4
IND	23	34	4	5
LAC	20	36	8	2
LAL	19	38	6	3
MEM	20	39	4	3
MIA	20	37	6	3
MIL	22	34	6	4
MIN	20	37	6	3
NJN	20	37	6	3
NOR	18	41	4	3
NYK	21	34	8	3
OKC	20	37	6	3
ORL	21	34	8	3
PHI	20	37	6	3
PHO	21	38	4	3
POR	20	38	6	2
SAC	17	42	5	2
SAN	21	35	7	3
TOR	20	39	3	4
UTH	22	34	7	3
WAS	20	36	8	2
AVG	20.4	36.6	5.8	3.2

From this table we see that the Bobcats, Rockets and Pacers each have 23 games this season in which they have no rest. This is tops in the league. At the other end we have the Sacramento Kings, who only have to play 17 games this season without rest.

The number of times a team plays with no rest always has a narrower range than the distribution of each team's opponent's rest. The reason for this is that the number of times a team gets an unrested opponent is basically unrestricted whereas the number of times a team plays with no rest is somewhat limited by the fact that they must have about 57 days of rest over the season. So, the main difference between one team's schedule and another's lies not so much in their rest distribution but in the rest distribution of their opponents. The data for the 2011-12 season are shown in the table below.

of Occur of Opp Days Rest 2011-12

ATL	25	37	2	2
BOS	17	40	5	4
CBC	28	29	7	2
CHI	24	33	5	4

TOR	19	36	8	3
UTH	23	33	8	2
WAS	23	33	6	4
AVG	20.4	36.6	5.8	3.2

Here we find some gross inequities. The Miami Heat get only 11 unrested opponents all season but the Bobcats get 28. This gives the Bobcats a significant scheduling advantage over the Miami Heat. A difference of this magnitude can be worth as many as 5-8 wins over the course of a season – especially if the team has the personnel to take advantage of the favorable scheduling. This difference in win total can be enough to turn a six seed into a three seed, and certainly can turn an NBA futures loser into an NBA futures winner.

PLAYING FOUR GAMES IN FIVE DAYS

One of many interesting scheduling situations in the NBA is the 4-games-in-5-days situation. Usually, it consists of a set of back-to-back games, a day off and another set of back-to-back games. However, in strike years, when the season is compressed, a four-game-in-five-days stretch can include a game, a days rest and then three games in three days. Similarly, there can be three straight games, a days off and then another game.

This season there are 218 occurrences of a team playing four games in five days—an average of 7.27 per team over the 66-game season.

The handicapper can theorize that the performance of a team playing their fourth game in five days may be compromised because of the scheduling situation. Put simply, the team is tired. The obvious questions an intelligent handicapper will have regarding the four games in five days situation include, “Is the likelihood of a team winning the game reduced by the fact that they are playing their fourth game in five days? If so, by how much? Is the likelihood of a team covering the spread reduced by the fact that they are playing their fourth game in five days? If so, by how much? Is the line adjusted for the fact that a team is playing their fourth game in five days? If so, by how much?”

Of course, the answers to these questions may vary greatly from team to team. One might expect that a young, deep team that is in good physical condition might perform better than an older team that relies heavily on its star players when playing their fourth game in five days. However, for the purposes of this analysis we will only examine the league’s results as a whole. Individual team trends when playing their fourth game in five days and when facing a team that playing their fourth game in five days can be uncovered using the Sports Data Query Language (SDQL).

Now let’s get to the questions posed earlier. To answer them we will use the results of the past seventeen NBA regular seasons. That’s a pool of 19,602 games. The strategy is to look at the league’s results as a whole and then compare them with the league’s results when playing their fourth game in five days. We’ll start by getting the league’s results as a whole based on the site (home vs away). In the NBA, the home team is 11,854-7748 straight up over the past ten seasons winning by an average of 3.3 points as a favorite of 3.4 points. This is a winning percentage of 60.5%. The away team

is, of course, just the opposite. They are 7748-11,854 straight up losing by an average of 3.3 points getting an average of 3.4 points. This is a winning percentage of 39.5%.

Now that we have the league’s results as a whole, let’s look at just the 4-games-in-5-days results. When an away team is playing their fourth game in five days they are a combined 359-648 straight up over the past seventeen seasons losing by an average of 4.8 points per game. This is a winning percentage of 35.6%. So, from these results we can conclude that the performance of an away team playing their fourth game in five days is reduced. In fact, it is reduced by about 1.5 points because any away team loses by an average of 3.3 ppg but an away team playing their fourth game in five days has lost by an average of 4.8 ppg. The obvious question the handicapper would ask is, “Is this reduction in performance accounted for in the line?” The answer is “not quite.” Over the past ten seasons teams that are on the road and playing their fourth game in five days have been – on the average – a 4.5 point underdog. So, the linesmakers adjust the line somewhat when a team is playing their fourth game in five days and they are on the road.

Now let’s look at the home team that is playing their fourth game in five days. Over the past ten seasons, the league is a cumulative 281-243 in this situation winning by an average of 1.8 points while being favored by an average of 2.1 points. A record of 181-129 has a winning percentage of 53.6%. So, it appears that playing their fourth game in five days is detrimental to a team’s performance even if they are at home because all home teams have won 60.5% of their games by an average of 3.3 points in the same time span. We can summarize our results in a table, shown on the bottom of the facing page.

Now let’s take a look at all the 4-in-5 situations scheduled for the upcoming 2011-12 season. The schedule-makers assign the four-in-five situation as necessary without regard to an equitable distribution amongst the 30 NBA teams. If a team has a relatively small number of four-in-five situations it is an advantage and if a team hosts a relatively large number of opponents that are playing their fourth game in five days it is an advantage. Of course, if a team plays a large number of 4-in-5 situations and faces a small number of teams playing their fourth game in five days it is a scheduling disadvantage. This information is especially useful when playing

The League’s Results from 1995-96 through 2010-11

			HOME			
	W/L record	Winning %	SUM	ATS Rec	ATSm	Line

PLAYING FOUR GAMES IN FIVE DAYS (CONTINUED)

NBA futures because a team with a scheduling advantage in 4-in-5 situations can be expected to win more games than the linesmakers forecast and teams with a scheduling disadvantage can be expected to win fewer games than forecast.

The adjacent table gives the number of occurrences of the fourth-games-in-five-days scheduling situation over the 2011-12 season for each team and their opponent. The first column simply gives the team name. The second column gives the number of occurrences of a four-games-in-five-days scheduling situation for each team. For example, we can see that Atlanta plays nine games this season that are their fourth game in five days. The third column gives the number of times each team faces an opponent that is playing their fourth game in five days. For example, we see that the Hawks get ten opponents this season who are playing their fourth game in five days. The fourth column gives the difference between the two with the higher number indicating a more favorable schedule.

This season, the Charlotte Bobcats have to play fourteen games in which they are playing their fourth game over the last five days. This is the most in the league. The Grizzlies have the second most at twelve and they are followed by the Spurs with eleven. On the other hand, the Hornets and Timberwolves only have four 4-in-5 stretches this season.

Even bigger disparities occur in the third column. The New York Knicks get fourteen opponents this season that are playing their fourth game in five days, whereas the Raptors, Cavs and Clippers each get only two each.

The final column gives the net difference between playing and hosting a stretch of 4-games-in-5-days. The Knicks have the highest positive differential at plus-nine. They are followed closely by the Hornets at plus eight. The two teams with the worst differential are the Grizzlies and the Bobcats, both at minus-eight.

As the 2011-12 results come in for this and other scheduling situations presented in this book, astute handicappers will be able to see which teams are affected the most by the frenetic pace. These handicappers will have a significant advantage over those who handicap this season in the same manner that they handicapped previous NBA seasons. The Sports Data Query Language will allow a complete investigation of these situations over the internet for free.

Don't miss out on any of it, get on KillerSports.com and re-

search the NBA like a professional. For more information, visit KillerSports.com.

BACK-TO-BACK-TO-BACK GAMES 2011–2012

Because of the lockout, the NBA schedule-makers have jammed 66 games in 124 days. This has necessitated the back-to-back-to-back scheduling situation, which is not normally a feature of the NBA schedule. Playing games on consecutive days is hard enough but playing three games in three days must be debilitating. The NBA has saddled every team with at least one of these this season. The first comes over the first three days of the season, as the LA Lakers face the Bulls on the 25th, the Kings on the 26th and the Jazz on the 27th. In all three games, the Lakers will vs facing a team that is playing their first game of the season.

A complete listing of the number of times each team either is playing their third game in three days or facing an opponent that is playing their third game in three days is presented in the table below and a complete team-by-team listing is given on the facing page.

of Back-to-Back-to-Back Games 2011-12

Team	Playing	Hosting	differential
ATL	2	2	0
BOS	1	0	-1
CBC	1	1	0
CHI	1	3	+2
CLE	1	2	+1
DAL	1	2	+1
DEN	2	0	-2
DET	2	2	0
GST	1	3	+2
HOU	1	0	-1
IND	2	2	0
LAC	2	1	-1
LAL	1	0	-1
MEM	1	0	-1
MIA	1	0	-1
MIL	1	3	+2
MIN	2	2	0
NJN	2	4	+2
NOR	1	1	0
NYK	1	2	+1
OKC	1	1	0
ORL	1	1	0
PHI	2	1	-1
PHO	2	1	-1
POR	2	1	-1
SAC	1	2	+1
SAS	2	2	0
TOR	1	0	-1
UTH	1	2	+1
WAS	2	1	-1

Looking down the first column we see that the league has been very fair as every team in the league only has one or two three-games-in-three-days sequences this season. The parity, however, does not carry over to the second column. Here we find that there are seven teams that do not get a single opponent who is playing their third game in three days.

On the other end of the rankings, we find the New Jersey Nets, who get four opponents that are playing their third game in three days. This has to help the Nets' cause.

The Bucks, Warriors and Bulls each get three opponents this season who are playing their third game in three days.

The Difference column shows that the highest positive differential is plus two, shared by the Bulls, Warriors, Bucks and Nets. On the unfortunate end, we find the Nuggets, the only team in the league with a minus-two in this category.

It is interesting to investigate the site of these games. For example, how many of the 42 three-games-in-three-days this season are all on the road? Are there any that are all at home and hence involve no travel? Are there some that all involve travel, as an away-home-away sequence would?

Answering these questions is easy with the Sports Data Query Language (SDQL). The SDQL text: **rest+p:rest=0 and H and season=2011** will generate a listing of all the 3-in-3 games that are being played at home this season. The game listing reveals that 20 of the 42 "3-in-3" sets this season end at home. The complete distribution of the site sequences is given below:

AAA	10
HAA	1
AHA	5
AAH	4
AHH	3
HAH	16
HHA	3
HHH	0

The lion's share of the games are either the HAH sequence or the AAA sequence and there are no HHH sequences.

Another thing to investigate is the opponent's rest. It turns out that is 18 of the 42 third-game-in-three days, the opponent is unrested as well, thus evening the match-up somewhat.

Finally, we can investigate the number of games in which BOTH teams are playing their third game in three days. There is one such game all season. On March 24, the Pacers and Bucks face each other in Milwaukee. Both teams played on the previous two days.

AND we didn't even investigate the MIDDLE game of the 3-in-3 set. Perhaps that is where all the value lies. Maybe the UNDER will be the play in the middle game. Pay attention.

The handicappers who are the first to uncover the manner in which teams perform in these unusual scheduling situations will have a big advantage over the linesmakers.

Play Smart. Play Informed. Use the SDQL to investigate these scheduling situations.

OPPONENTS ON LONG ROAD TRIPS

When the league made the schedule in December, it had to arrange 33 home games and 33 road games for each team. The result is 66 regular season games that contain numerous homestands and road trips. The number of consecutive road games a team must play over the entire season does not vary greatly from team to team because of the constraint that each team must have 33 home games and 33 road games. There are no such restrictions, however, on the number of times a team hosts an opponent that is playing in at least their third straight away game.

Theoretically, a team can face an opponent that is playing in at least their third straight road game in all 33 of their home games. This season, the average number of times a team will face an opponent that is playing in at least their third straight road game in 2011-12 is 8.5. Continuing, the average number of times a team will face an opponent that is playing in at least their fourth straight road game is 4.4 and the average number of times a team will face an opponent that is playing in at least their fifth straight road game is 2.2.

Of course, due to the vagaries of the schedule, some teams get a lot more than average and other a lot fewer than the league average.

The interesting feature to NBA futures bettors is how many times each team hosts an opponent that is playing in at least their third straight road game. The accompanying table shows just that. The first column gives the name of the team, the second column gives the number of times each team is hosting an opponent that is playing in AT LEAST their third straight road game. The third column gives the number of times each team is hosting an opponent that is playing in AT LEAST their fourth straight road game. And, finally, the last column gives the number of times each team is hosting an opponent that is playing in AT LEAST their fifth straight road game. The range in the second column is significant. The New Jersey host thirteen opponents that are playing in at least their third straight road game – highest in the league. They are followed by the Knicks and Nuggets each with twelve.

On the unlucky end of the scheduling spectrum, we find the Miami Heat, with only four games this season in which they opponent is playing in at least their third straight road game. They are followed by the Grizzlies, Spurs and Wizards, each with only five opponents that will be playing in at least their third straight road game.

In the “Opp 4+A” column we see the discrepancies increase. The New York Knicks get eight opponents playing in at least their fourth straight away game. The Rockets and Magic have only ONE such opponent.

Note that a complete listing of games where their opponent is playing in at least their third straight away game appears on the

team’s schedule pages, in section two of this book.

Continuing, we see that the Nuggets and Raptors have five opponents this season that are playing in at least their fifth straight road game, whereas the Houston Rockets have NONE.

Number of Opp’s in 3+ Away; 2011-12

Team	Opp 3+ A	Opp 4+ A	Opp 5+ A
ATL	10	4	1
BOS	8	5	1
CBC	10	6	4

AVG	8.5	4.4	2.3

The number of times a team hosts an opponent that is playing a long road trip is yet another factor that should be considered when playing NBA Futures. Play Smart. Play Informed. Get on KillerSports.com and find out just how each team performs vs an opponent that is on a long road trip.

SDQL Hint

To see a team’s results, in this case the Thunder’s, when facing an opponent who is playing in at least their third straight road game, use the SDQL text:

site=home and op:site=away and opp:site=away and team=Thunder

QUICK SDQL OVERVIEW

SDQL stands for Sports Data Query Language. It is a new language that allows the investigation of past sports results over the internet using your home computer. It is easy, it is fast and it is free. If you can perform a search on Google, you can query the past results of professional sports games.

Like the Google search, there is a text query box in which you enter what you would like to search. Unlike Google, the search has to be specific and you must use the Sports Data Query Language. The advantage of the SDQL is that you get one hit, which is exactly what you asked for – not a billion hits, most of which are not what you are looking for.

For example, if you want to see the results for all road favorites in the NBA since 1995-96 (the start of the database), simply enter:

into the query text box and then click on the query button. It is as simple as that! There are SDQL query text boxes at many internet sites. The most developed is currently at:

killersports.com/nfl.py/query

To see all the NBA games in which a team committed at least twenty-five turnovers and won the game, enter

That's it!

The SDQL allows access to billions of situations that are of interest to sports historians, the sports media, fantasy league participants and serious sports bettors.

The ability to quickly and efficiently interrogate historical data in the NBA (as well as the NFL, NHL, MLB and NCAA football and basketball) will provide the SDQL user a terrific advantage over those that just pore over box scores and read other people's interpretations of the results.

Perhaps the best way to grasp the SDQL is to simply try the hundreds of examples in the trends section of book using query page.

Basically, there are only a couple of key ideas that will get you well on your way to becoming an SDQL master.

The first is that a query consists of a number of conditions separated by the word "and." The second is grasping the difference between the team and the opponent. In sports, there are two combatants. To distinguish between them, SDQL calls one of these the **team** and the other the **opponent**. This allows access to results based on

both the performance of the team and the performance of their opponent. For example, we can see how a team performs when they score at least 100 points and we can see how a team performs when their opponent scores at least 100 points.

For example, to see how the Heat perform in games in which they scored at least 100 points, use:

When this query is run, the computer responds with a records summary and a game listing of all the games since 1995 in which the Heat scored at least 100 points.

To see how the Heat perform in games in which they allowed at least 100 points, use:

The o: prefix on the "points" directs the "points" parameter to the opponent.

To see how the Heat perform in games AFTER they scored at least 100 points, use:

Here, the p: prefix on the "points" directs the parameter to the team's previous game.

Each one of these queries has two SDQL phrases. The first defines the team and the second gives a condition. There is no limit to the number of SDQL phrases that can be strung together with the word "and."

That's it. This is the basic structure of the SDQL. This structure will allow the thorough interrogation and investigation of historical sports data. Understanding this structure is the key to understanding the SDQL. Once you have a grasp of this structure, you will be able to perform your own investigations.

Start by trying the many examples in this book. If you have any questions about the SDQL, address them to the sportsdatabase.com discussion group at:

<http://groups.google.com/group/SportsDataBase>

This group is monitored by numerous SDQL masters who will be able to address all your well-posed questions. Happy Hunting!

killersports.com/nba.py/query

Master the Sports Data Query Language

Follow these 5 step to became a certified SDQL Master:

- 1) E-mail us at Masters@SDQL.com to register as a candidate.
- 2) We announce your candidacy to our google discussion group.
- 3) You answer discussion group questions showing mastery in use of:
 - Parameter prefixes
 - Summatives such as Average and Sum
 - Integration of Python
 - Group-bys
- 4) Other Masters will coach you through these to hone your skills.
- 5) You pass the Masters exam

Successful candidates are listed as Masters on SDQL.com and are eligible to become handicappers at <http://KillerCappers.com>.

E-mail us at **Masters@SDQL.com** to get started.

Sports Data Query Language on a USB Drive from \$49

KillerSports.com is now offering their best of the web sports databases on a USB drive. The SDQL database code runs on your own computer and an internet connection is not required.

You will access your sports databases via a web page similar to the KillerSports.com SDQL query page with the web server running on your computer. Please see http://killersports.com/sdb.py/about_usb for a list of parameters and date ranges shipped with each sport.

One of the most exciting new features of the USB product is the ability to extend the database with your own data. The SDQL loads the database from a simple tab delimited file that you can maintain with a spread sheet or database program of your choice. The USB product is shipped with a snapshot of a database and you can extend the database using your own tools with new results and/or new parameters. You can even build your own private SDQL database from scratch!

For more details and to place your order, go to <http://KillerSports.com>

THE SCHEDULE

This section contains a two-page schedule for each NBA team. Besides the date of the game and the names of the teams playing, the schedule includes the day of the game and the rest combination. The format of the rest combination is such that the rest of the team is given first and the rest of their opponent is given next.

In addition, there is a column headed OPP SCH. This column lets you know when a team's opponent is playing the second of back-to-back road games, playing their fourth game in five days and if their opponent is playing in at least their third straight road game three game road trip. If the team's opponent is playing the second of Back-to-Back road games it will be indicated by "B2B." If the team's opponent is playing their fourth game in five days, a "4in5" will appear in the OPP SCH column. If the team is playing in at least their third straight road game, a the phrase "nth A" will appear in the OPP SCH column, where n is the number of their consecutive road game.

For example, if the team's opponent is playing in their third straight road game, "3rd A" will appear. If the team's opponent is playing in their sixth straight road game, "6th A" will be in the OPP SCH column. The goal of the authors of the Killer Sports Schedule/Log is to provide the reader with information "at a glance," thus preventing the incessant flipping back and forth through a schedule.

Along with the scheduled-based information there are spaces to fill in the results. The columns labeled side and total are for the lines and the column headed "FINAL" is for the final score.

The remaining nine columns are provided for the user to enter whatever results he/she feels are important. The headings we entered are the ones usually used by handicappers, but we hope our customers feel free to redefine these columns. If the columns are used as we headed them, most handicappers simply enter W, L or P in the boxes that apply. If you miss a game or two, up-to-date Schedule/Log results are available at KillerSports.com. Simply click on the Schedule/Log link from the NBA home page.

Play Smart. Play Informed. Get on KillerSports.com.

WASHINGTON WIZARDS

BULLET POINTS FOR THE 2011–2012 NBA SCHEDULE

For the first time in over ten years, a team will face six straight unrested opponents. From 3/17/2012 through 3/28/2012, the Chicago Bulls face six straight unrested opponents. In the last five, they are rested. In fact, looking from 3/10 to 3/28, the Bulls play ten games. In nine of the ten, they are facing an unrested opponent. Check it out by flipping back to their schedule.

Over the past ten NBA seasons, there has been a total of one occurrence of a team playing five games in six days. This season, there are 29 such games.

- The Cleveland Cavs have only THREE games the entire season in which they are rested and their opponent is not.
- The Miami Heat only host two opponents all season who are playing the second of back-to-back road games – and in both, they are unrested as well.
- This season has the three longest homestands in the past ten NBA seasons. The Cleveland Cavaliers are at home from February 8th through February 28th, playing nine home games over these 21 days. The Denver Nuggets are at home from Monday March 5th through Wednesday March 21st, playing nine home games on every odd day in the span. The Sacramento Kings have a nine-game home stand from Wednesday March 7th through Thursday March 22nd, playing nine games in 14 days. This is a significant departure from the last strike season in 1998-99. In that season there were no homestands of seven games or longer.
- From 3/17 to 3/28 the Chicago Bulls face six straight unrested opponents. This is the longest unrested opponent streak this season. The last time a team faced six straight unrested opponents was during the 2001-02 season.
- From 3/13 to 3/17 the Dallas Mavericks have a three-game homestand in which they are rested and each one of their op-

ponents in playing the second of back-to-back road games.

- The Cleveland Cavaliers start the season with fourteen straight rested opponents. This is the longest string of unrested opponents this season. Cleveland first unrested opponent this season, comes on January 21st.
- From 1/2 through 1/5, the Buck have a string of three straight games in which their opponent is unrested and playing their fourth game in five days.
- On 4/14 and 4/16 the Nets play the Celtics and Heat and in both cases their opponent is playing the second of back-to-back road games and their fourth game in five days.
- From 4/15 through 4/19, the Hornets have four straight opponents that are playing their fourth game in five days.
- From 1/17 through 1/25, the Utah Jazz play four straight home games in which they are rested vs an unrested opponent. In the last three, their opponent is playing the second of back-to-back road games.
- From 1/10 through 1/14, the Washington Wizards have four straight opponents who are playing their fourth game in five days.
- From 3/5 through 3/10, the Wizards have three straight home games vs Western Conference teams who are playing the second of back-to-back road games.
- The Orlando Magic host six opponents this season who played in Miami the day before. The Heat host NO opponents who played in Orlando the day before. In 2010-11, the Miami Heat enjoyed eight opponents who played in Orlando the previous day.

The 2011–12 KillerSports.com NBA Schedule/Log

THE TEAM TRENDS

There are 300 team trends in the next section – ten for each of the thirty NBA teams. Each trend is perfect and each is of the ATS variety. The first five trends for each team are Play-ON trends and the second grouping of five trends are Play-AGAINST trends.

The trends are presented in three columns. The first is the trend ID. This allows the trend to be referenced. For example, ATL005 in Atlanta's trend number five.

The second column gives the English text of the trend. For example, "The Hawks are 9-0 ATS (+8.7 ppg) since March 01, 2009 off a win that broke at least a three-game losing streak." Note that the number in parentheses immediately following the record is the average margin by which a team has covered or failed to cover the spread. Here, the Hawks are 9-0 ATS, covering by an average of 8.7 points per game.

The last column contains the Sports Data Query Language (SDQL) text that can be used to see the updated results for the trend anytime. Simply enter the SDQL text into the query box

on-line and click the query button run the query.

SDQL text boxes are available and SportsDataBase.com, KillerSports.com and as well as others sports information websites. No membership or registration is needed and there is no charge to run a query. It's similar to Google. If you can Google, you can SDQL.

A complete list of which of the 300 trends are active on a particular day will be available on-line. That's right, very early each morning, after the results from the previous day are entered into the database, the 300 trends will be automatically run and a list of which ones apply to the games that day will be available. You will be able to "click" through to the complete game listing for the trend to see if it has had any active dates already in the current season. Sometimes a 10-0 ATS trend "goes bad" because of a change in team philosophy or player personal or simply because it wasn't a good trend to begin with. Other times the trend can reel off 5, 6 or 7 straight winners. These of course, are the trends you want to follow. With a cursory knowledge of the Sports Data Query Language, you will soon be researching situations of your own choosing.

ATLANTA HAWKS

PLAY ON

TREND ID	DESCRIPTION	SDQL TEXT
ATL001	The Hawks are 15-0 ATS (+7.5 ppg) in the history of the database as a favorite with at least one day of rest after a double-digit road loss in which their DPS was minus 15 points or less.	team=Hawks and F and 0<rest and p:margin<=-10 and p:A and p:dps<=-12
